Facial Picture Tips

The better quality of the picture, the better results in our smile designs.

Facial Photo is used to deliver a facially-guided mock-up. It correlates the dental and facial structures and it helps assess the dental esthetics from the frontal plane.

This reflection is a sign of good, even lighting of the patient

Setting up your photo room

You will need:
- A dimmable ring light
- A solid-colored background

Other things to keep in mind:
- Head centered
- Eyes leveled with the lens of the camera
- Hold your phone/camera straight
- Great lighting towards the patient's face
- Big wide smile
- Mouth slightly open
